

# Cooling Boxes

current Status:

	Box #1	Box #2	Box #3
<b>Hardware</b>			
building parts	done	in progress	in progress
assembling	done	-	-
<b>Electronics</b>			
ordering parts	done	parts here	most parts ordered or delivered, awaiting some offers
assembling	done	-	-
<b>Vacuum</b>			
pump	from PSI	ordered	?
system	test setup	parts ordered	parts ordered

# Module Storage

constantly flushing cabinet with N<sub>2</sub> at 10l/h

estimate: 1 bottle / month

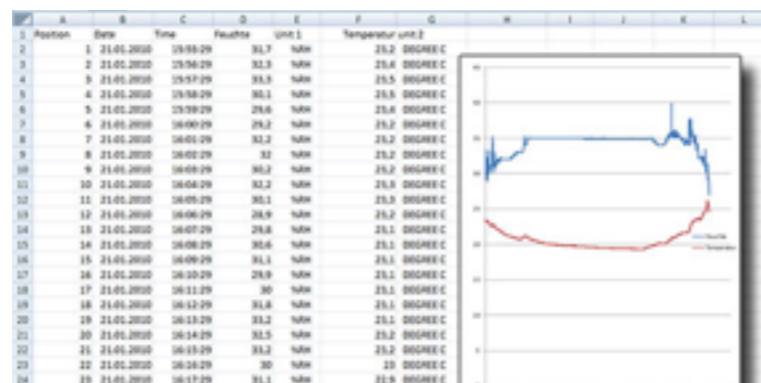

-> rel. hum ~24% (before 31%)

(measured with this living room meteo station thing)

Proposal:

Temp/humidity logger: 125 €

# Workstations

had a discussion with the ISG gang together with Rainer and Mauro

## What was the Problem?

- last year SMB was not an option because they experienced problems when e.g. compiling on it
- thus they proposed to use LDAP, which caused further Problems
- in the meantime the SMB problem is resolved

## the Plan now:

- use smb with a generic user to mount Groupshare via fstab
- have local users on our machines
- store data on groupshare
- but also backup homedirectories to central server
- homedirectories ONLY for things like tmp files, NO LAB DATA!
